CONFIGURING WEAVE CLIENTS: AN INTRODUCTORY SERIES OF TRAINING TUTORIALS

This document introduces you to our training course: *Configuring Weave Clients*.

WHAT IS IT?

Configuring Weave Clients is an introductory series of training tutorials that teaches the essentials of Weave from the perspective of configuring a Weave web client application.

The key aspects of setting up a Weave client are introduced, via discussion topics and walkthrough tutorials. Students will progressively build their own Weave client as they work through the 6 part training program.

The intent of this course is to equip students with a foundational knowledge to allow them to confidently approach the task of building their own Weave web clients, as well as managing their existing Weave clients.

A snap-shot of course content is as follows:

- *Get Started with a Simple Map Display Weave Client*
 - *Define a Simple Layout for a Weave Client*
 - *Add a Map with Data Layers*
 - *Add a Table of Contents*
- *Entities and Source Data and the Active Layer*
- *Aspatial Queries and Selections*
- *Spatial Queries*

WHO IS IT FOR?

If you are new to Weave this course will provide the foundational knowledge to help build and maintain functionally rich enterprise web mapping clients using Weave. Weave is a powerful framework for building enterprise solutions and the knowledge gained in this course will illustrate the many ways Weave can be used throughout an organisation.

If you have been using Weave for some time it is likely that your knowledge is constrained by the initial training you had and the work you currently do, that is, you probably know enough to do what is needed to keep the status quo. This course will peel back some of the opaque layers underpinning your current knowledge and provide you with the ability to do more with your Weave system.

In this current volatile market, where staff are hard to find and keep, succession planning is of paramount importance. This training course provides the opportunity to skill up others to ensure there is a good spread of knowledge in your organisation, which not only lowers the risk of personnel resourcing issues but provides a succession path for staff.

HOW LONG IS IT?

The course is delivered over two days, and can be carried out as contiguous days or as separate days.

HOW IS IT CONDUCTED?

Our typical training course is delivered live through the internet using video conference services such as Zoom or Teams. We also provide onsite training and will negotiate costs for these as required.

WHAT RESOURCES DO I NEED?

The course is completely self-contained and provided as a zip file that includes the Weave software and training data base. Students will require a reasonably powered Windows PC that they have Administrator access to in order to install Weave. Students will require an internet connection and a video conference service to participate in the training.

WHAT DOES IT COST?

Cost per student is \$2,000 exc. GST with a minimum of 2 students per course.

WHEN IS IT AVAILABLE?

Training courses are demand driven, so we will work with you to schedule the training to meet your needs.

STUDENT FEEDBACK

“Very relevant to my role. Easy to follow. Excellent instruction. All my questions were answered.”

~~~~~

*“Short tutorials throughout the course were an interesting and engaging way for me to revise and apply content from the previous section.”*

~~~~~

“I have a background in software configuration and coding (not xml) and I found the activities at the right level - achievable without being too easy.”

WHAT OTHER TRAINING COURSES ARE AVAILABLE?

Cohga offers a range of training courses to fit your needs. Once the foundational knowledge of Weave has been gained through **Configuring Weave Clients** course then we recommend moving on to the advanced course offerings.
